ChatGPT said:

Your idea is commercially viable, and I think it gives **Efosa Ojomo a clearer business identity than positioning it purely as an AI or Technical Product Management consultancy.**

However, I would refine one important aspect: **"Are you busy? We are here to help" is a good marketing hook, but it is too broad to be your complete business positioning.**

You are not simply selling assistance. You are selling the ability to **build, operate, manage, and improve business technology so business owners can focus on running their businesses.**

That is a stronger commercial proposition.

1. How I would position Efosa Ojomo

PROPOSED BRAND MESSAGE

Busy running your business? Let us handle the technology.

From building your website and custom software to managing your digital products, customer support systems, and repetitive business tasks — we help you build, run, and improve the systems behind your business.

Build | Manage | Automate | Grow

This communicates that you provide an ongoing service, not just one-off website development.

2. Organize your offerings into four service pillars

Instead of listing 10 or 15 unrelated services on the homepage, group everything under four categories.

1. Build Your Digital Presence

We build professional websites, web applications, online stores, client portals, and custom software tailored to your business.

Ongoing service: Website updates, technical maintenance, hosting oversight, bug fixes and improvements.

2. Manage Your Products & Technology

Have a product idea but don't know how to execute it? We help define requirements, build a roadmap, coordinate development, manage delivery, and improve the product after launch.

Ongoing service: Fractional technical product management, engineering coordination and product oversight.

3. Improve Customer Support

We help businesses set up and manage customer inquiries, support tickets, knowledge bases, chatbots, and customer communication workflows.

Ongoing service: Support platform management, automation monitoring and reporting. Human customer-service staffing can be a separate offering if you establish the team and capacity.

4. Automate Repetitive Work

We automate activities that consume your team's time, such as data entry, appointment reminders, customer follow-ups, document processing, and routine reporting.

Ongoing service: Workflow monitoring, troubleshooting, maintenance and optimization.

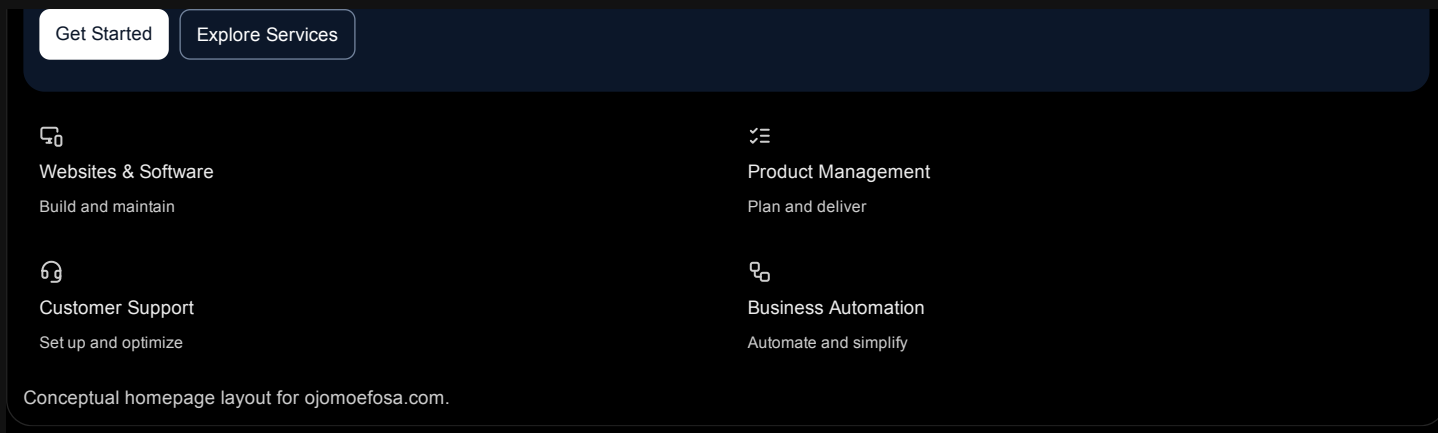

3. Your new homepage could look like this

EFOSA OJOMO

YOUR REMOTE TECHNOLOGY PARTNER

Busy running your business? We'll handle the technology.

We build and manage your website, develop custom software, take your product ideas from concept to launch, improve customer support, and automate repetitive tasks.

Conceptual homepage layout for ojomoefosa.com.

4. How to make money from each service

Your offering naturally supports two revenue streams: one-time project fees and ongoing monthly agreements.

Service	Initial engagement	Ongoing engagement
Website development	$1,000–$4,000	$149–$399/month
Custom software	Quoted per project	Maintenance retainer
Product management	Paid discovery or roadmap project	$1,500+/month
Customer support systems	$750–$2,500 setup	$150–$500/month
Business automation	$500–$3,000 setup	$100–$400/month

These are proposed test prices, not validated prices for your business. Custom software and fractional product management may require substantially larger budgets depending on workload.

For example, if a customer hires you to build a website, your relationship doesn't have to end at launch. You can offer an ongoing website care plan covering security updates, content changes, performance monitoring and agreed minor improvements.

The important boundary is that **maintenance is not unlimited development**. Each monthly package should specify covered work, response times, exclusions and any usage limits.

5. The business model I recommend

I would call the concept a **Managed Technology & Business Solutions Consultancy**, rather than a general virtual assistance company.

The positioning would be:

Efosa Ojomo — Your Technology Partner, From Idea to Everyday Operations.

Your customers would be able to:

- Hire you to **build** a website or software product.
- Retain you to **manage** that website, product, or technical operation.
- Hire you to **automate** administrative and operational processes.
- Engage you to **lead** product discovery, development, and delivery.

One operational risk is especially important: offering full customer-service management is very different from implementing customer-support technology. The first requires staff coverage, service hours, quality control and escalation procedures. Unless you plan to hire and supervise support agents, begin by selling support-system setup, optimization, and automation rather than promising to handle every customer conversation.

Similarly, you should avoid an unlimited *"we handle everything"* promise. It attracts difficult-to-scope projects and can make a small consultancy unprofitable.

6. The next strategic decision

I would build the website around the four pillars above, but prioritize website development and maintenance, workflow automation, and product management as your initial revenue-generating services.

Before you refactor, decide which buyer the homepage should speak to first.

Who do you primarily want Efosa Ojomo to serve?

- **Small business owners**
  Websites, maintenance, customer support systems and automation. More standardized, lower-budget engagements.
- **Startups and founders**
  Build software products, manage development, and take ideas from concept to launch. Larger projects, longer sales cycles.
- **Both, with separate service paths**
  Small-business managed services plus premium technical product and engineering consulting.

Develop my website strategy →

My preference is the third option, provided the two customer journeys are clearly separated. It allows you to earn recurring revenue from smaller businesses without restricting your ability to pursue larger software engineering, AI, and technical product management contracts.
